Cooperative / Collaborative Learning

Are your teachers using this research proven instructional strategy to involve more learners in the classroom?

This two-hour session will place participants in the same active-learning mode they will use in their classrooms.

What they will come away with

- Awareness of why CoLT is such an important and powerful learning strategy.
- Learn at least five different cooperative learning techniques and how they may be applied to specific subjects.
- Know methods of group assignment and how this relates to differentiated instruction.
- Receive instruction on the use of rubrics so students know what is expected of them during collaborative work.
- Classroom management concepts for CoLT.
- Facilitator and group roles.

“This session is important for building the very foundation of differentiated instruction!”

Facilitator: Tim Clapper has taught and modeled effective leadership principles for over twenty years and has taught youth in both SES affluent and disadvantaged schools. He has facilitated professional development sessions with the same active methods he desires teachers to walk away with themselves. His expertise is sharing with educators how to differentiate instruction in a collaborative, brain-based manner to keep participants actively involved. Tim also shows educators how to take the fear out of integrating technology by using simple, common tasks to make a difference.
